

We are always mindful of the impact we are having on our people, our community, and the environment.

Steel that we distribute or fabricate

90%

Originates from mills that use at least 90% recycled scrap steel as a critical raw material.

Active recycling programs

32

100% of our company plant or yard locations have active recycling programs.

Volatile organic compounds (VOC's)

zero

We use powder to coat natural gas transmission pipe that is environmentally benign, and produce zero VOC's.

Typical diesel locomotive fuel savings

2-5%

By using our patented friction modifiers, railroads can typically save up to 2-5% on diesel fuel.

SUSTAINABILITY INITIATIVES

Green initiatives are integrated into our short, and long-term business strategies with energy and recycling reporting requirements in place across the company.

Reduce land fill

waste

Concrete used to manufacture our precasted restrooms recycle fly ash from power plants, eliminating this material from the waste stream.
