

**inform.** by L.B. Foster

# inform. Media solution

Our Inform Messaging solution allows users to send out operational updates in pre-defined formats and templates that conform to corporate branding guidelines and communication standards. The solution is fully auditable and reportable, with granular security access allowing system administrators to assign users permission to update only the screens for which they are responsible.

# inform02 Mobile totem.

Battery powered, low power fully mobile display with wireless technology designed for indoor and outdoor operation. Launched as the first of Inform by L.B. Foster's unique display Systems, the Inform mobile display is a completely self-contained solution to mobile information.

Using the latest in high definition video displays, the system is capable of running for 24 hours at maximum brightness on a single charge from its built-in batteries.

Integrated Wifi and 3G/4G mobile communications allow this unique display to connect to a variety of information systems to meet your media display requirements.

The inform mobile all-weather wireless display is part of the inform by L.B. Foster display system range that incorporates fixed and mobile high definition display solutions. These include fixed totems and wall-mounted displays, with options for integrated touch screen technology.

## KEY FEATURES

### A truly mobile solution

Fully mobile single-sided totem designed to go through standard doorway with lockable wheels and chain facility for extra security. This ensures accurate digital information can be delivered anywhere at any time with increased customer viewability with no restrictions on where a unit is deployed.

### Exceptional battery life

Not constrained by having the unit plugged in, the 24 hours battery life ensures that customers can be informed in remote locations on a station environment or anywhere the unit is deployed and gives the operator confidence that information is being displayed when needed.

### Wireless, 3/4G comms

Real time information can be delivered to customers in locations where there is no Wifi or fixed communications available by utilising mobile technologies. This is especially important when service disruption is occurring as pertinent travel information can be displayed and fed to the units no matter where they are placed.

### inform media

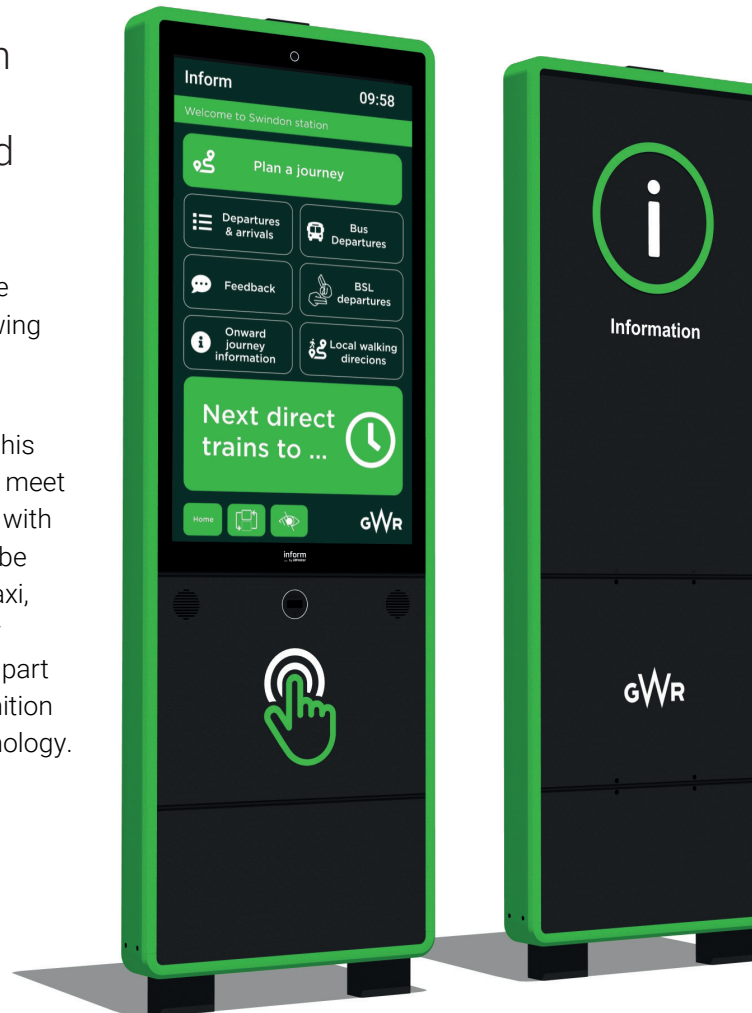

Connect, manage and control with our unique digital media solution. This allows local staff to manage content that is specific to a station or incident. Information such as local taxi, bus, services information can be displayed quickly to help better inform customers.

# inform04 Fixed totem.

High brightness, low power fixed totem with standard display or touch screen options, featuring wireless technology for indoor and outdoor operation applications.

Floor mounting to suitable foundation is facilitated by a separate galvanised mounting plinth with sub-surface cable routing, allowing floor finish to be reinstated around plinth for seamless look.

Integrated 3G/4G mobile communications and ethernet allows this unique display to connect to a variety of information systems to meet your media display requirements. Connect, manage and control with our unique digital software solution, inform media. Content can be customised locally within the station or near the incident. Rail, taxi, bus, and service information can be quickly added to help better inform customers. The inform all weather fixed totem display is part of the inform by L.B. Foster range of fixed and mobile, high definition display solutions, with options for integrated touch screen technology.

## KEY FEATURES

- > Interactive touch screen with multi-touch sensor technology capable of detecting 40 or more touch events at once with millisecond fast response and excellent touch point resolution. Interaction can only be achieved via finger or gloved hand, "false" (accidental) touches are minimised including palm rejection
- > High brightness displays readable in direct sunlight with auto dimmer facility to save power
- > Fire resistant for environments where low smoke and contained noxious substances are a critical requirement
- > Remote management and pro-active monitoring system
- > Vandal proof anti-glare toughened glass is both resistant to damage and for safety will not shatter
- > Designed to IP65 suitable for use in both indoor and outdoor locations
- > Any network SIM 3G/4G connectivity optional upgrade for Wifi
- > Secure media system is ensured with bespoke interfacing to customer information system and multiple levels of encrypted security
- > Connect, manage, and control dynamic content with our unique Inform media software solution
- > Audio visual optional upgrade allowing 2-way communication via wide angled camera, speakers and microphone.
- > Scanner optional upgrade for scanning QR codes and barcodes including boarding passes

# inform06 Wall mount touch.

High brightness, low power wall-mounted touch screen. With wireless technology designed for indoor and outdoor operation.

Integrated 3G/4G mobile communications and ethernet allows this unique display to connect to a variety of information systems to meet your media display requirements.

Connect, manage and control with our unique digital software solution, inform media. Content can be customised locally within the station or near the incident. Rail, taxi, bus, and service information can be quickly added to help better inform customers.

The inform all weather wall-mounted display is part of the inform by L.B. Foster range of fixed and mobile, high definition display solutions, with options for integrated touch screen technology.
