Wheel Data Management System

# Wheel Data Management System

## Keeping You Informed

L.B. Foster's **Wheel Data Management System (WDMS)** is a custom web-based application that allows subscribers to review train data and configure and manage alerts from any **WILD IV data**. The application is available anywhere there is an internet connection.

### PRODUCT FEATURES

#### Reports & Alarms

Each time a train is measured by a WILD system, a report is generated listing all measured train weights, impacts, lateral forces, and hunting data.

Through the **Thresholds** page, the value for alarm parameters can be configured. Users may designate personnel to automatically receive alerts when certain alarms are generated, and multiple thresholds may be set for each parameter to classify the severity of alarms.

#### Data & Analytics

Users can **browse recent trains** to see every measured train consist on their network in reverse chronological order. In addition to the measured data, reports indicate the site, location, train speed, train direction, and vehicle information.

Every train report contains a table of data for each vehicle, listing all measured parameters for every axle.

**Historical performance for any train, vehicle, or wheel** may be filtered through the vehicle history, wheel history, and train search pages.

#### Site Health

Each WILD IV system listed in WMDS is equipped with a **graphical interface** which provides a real-time overview of the health status of all major components. Hovering over any component will provide information on the nature of any issue as well as recommendations for troubleshooting.

Every report generated by WILD IV sites also captures a time-stamped **health status overview**, allowing users to review any issues that may have been present at the time of an alarm.

# Wheel Data Management System

## Train & Vehicle Reports

When a train is detected by a WILD system, a report is automatically generated and added to WDMS. Train reports may be found by reviewing browsing recent trains, reviewing daily or statistical reports, or by using the history and search functions.

Train reports can be found through several reporting and search features found within WDMS. Selecting any train's timestamp will produce the train report.

### Browse Recent Trains

Date: 08/03/23

### Consist/Weight Report

Consist/Weight Report • Impact Exception Report • Overload Report • Imbalance Report • Hunting Report

Train Header On ☐ Page Size 10000 Submit Back

SOUTHBOUND Train passed Bessemer, Track (2), Detector at 11:50 EDT Aug 3, 2023

Car	B-E Axle#	Lead End	Type	Tag	Tons	Speed MPH	Wild Alarm
1L	1 - 6	A	6 Axle Loco	USTX1234	223.5	52.2	
2L	7 - 12	B	6 Axle Loco	USTX1235	219.0	52.2	
3L	13 - 18	B	6 Axle Loco	USTX1236	219.4	52.2	
4L	19 - 24	U	6 Axle Loco	USTX1237	209.9	52.3	
5	25 - 28	A	Long Fr. Car	USTX1238	125.4	52.3	

Train reports provide a comprehensive table of all vehicles in the consist with relevant data and can be filtered to view reports specific to alert types – **impact exception, overload, imbalance, and hunting.**

Within a train report, selecting any specific vehicle tag number will produce a **vehicle report.**

Vehicle reports provide detailed data for each individual axle of a car. Reports are shown for each alert type, just like with train reports.

Any alarms generated for specific axles or cars cascade to the train report and are displayed alongside train reports anywhere they are tabulated within WDMS

All reports can be **exported** as either comma-separated (.csv) or tab-separated (.tsv) files.

# Wheel Data Management System

## Browse Recent Trains

All detected train consists for the day are automatically displayed. Users can filter recent trains by date, site, and direction.

The Browse Recent Trains page provides a table listing all pertinent information including the time and location of the measurement, speed and direction, max measurements for alarmable parameters, and the alarm status of the report.

### Trains per Site

08/03/23 00:00 | Last 24 hours from Now | Direction: All

By selecting the Chart button at the top of the page, users can see the frequency of measured trains and reported alarms for each site.

### Trains per Lead Loco Owner

08/03/23 00:00 | Last 24 hours from Now | Direction: All

When dealing with multiple car owners on your network, it can get complicated. WDMS logs car owners and the recent trains chart feature shows the volume of trains attributed to each owner.

# Wheel Data Management System

## Vehicle & Wheel History

### Vehicle History

Search result limit: 1000

### Threshold Search

Range: 08/03/23 08/03/23 FROM Train Date (EDT)  08/03/23 00:00 TO Train Date (EDT)  08/03/23 23:59

Site: All Direction: All Search result limit (\* for all): 1000

Search Type:  Overload Search Site:  All Direction:  All Owner Code  \*  1  KIPS

### Train Search

Range: 08/03/23 08/03/23 FROM Train Date (EDT)  08/03/23 00:00 TO Train Date (EDT)  08/03/23 23:59

Site: All Track: All Direction: All Search result limit: 1000

Speed range: from  to  MPH Lead Loco Tag: (Ex: XXXX 9999 OR \*)  \*  EOT Tag: (Ex: XXXX 9999 OR \*)  \*

### Wheel History

Owner Code (Ex: XXXX)  Car Number (Ex: 99999999)  Sort Order: ☒ Axle then Date ☐ Date then Axle

Search FROM Date (EDT)  08/03/23 TO Date (EDT)  08/03/23

Users can search for reports on **specific trains, vehicles, or wheels**, and can filter alarms by type and severity.

All search features are equipped with parameter fields to filter data, such as location, date ranges, operating speeds, track types, train and vehicle identifiers, and more.

Left Peaks & Nominals | ABCD-123456 | 02/03/22 - 08/03/23

Right Peaks & Nominals | ABCD-123456 | 02/03/22 - 08/03/23

Users can view historical wheel performance in chart form, easily visualizing performance improvements after maintenance.

Left and right wheel performance are plotted independently. Peak and nominal loads for each individual axle can be toggled on and off to allow for comparative views.

# Wheel Data Management System

## Configuring Alarms

On the **Thresholds** page, users can configure thresholds for each type of alarm parameter. Users can also add custom alarms for other parameters provided by WILD train reports. Alerts for alarms can be transmitted via **FTP or email** to a list of designated recipients.

Thresholds

Add	Impact Exception Criteria												
▲ ID	Name	Description	Location	Direction	Owner	A	B	C	Peak D	E	Last updated		
Edit	1	Default Exception Criteria	This is the default exception criteria.	*	*	*	0.0	0.0	0.0	125.0	140.0	Mon May 09 10:08:51 EDT 2016	
Add	Overload Criteria												
▲ ID	Name	Description	Location	Direction	Owner	A	B	Overload C	D	E	Last updated		
Edit	1	Default Overload Criteria	This is the default overload criteria.	*	*	*	0.0%	0.0%	10.0%	15.0%	20.0%	Tue Jun 23 12:04:21 EDT 2015	
Add	Imbalance Criteria												
▲ ID	Name	Description	Location	Direction	Owner	Side-to-Side Imbalance					Last updated		
						A	B	C	D	E			
Edit	1	Default Imbalance Criteria	This is the default imbalance criteria.	*	*	*	0.0	15.0	20.0	0.0	0.0	Mon Jun 10 10:00:53 EDT 2013	
Add	Hunting Criteria												
▲ ID	Name	Description	Location	Direction	Owner	A	B	Hunting Index C	D	E	Last updated		
Edit	1	Default Hunting Criteria	This is the default hunting criteria.	*	*	*	0.0	0.3	0.45	0.6	0.0	Mon Jun 10 10:01:59 EDT 2013	
Add	Custom Criteria												
▲ ID	Name	Description	Location	Direction	Last updated								
Edit	5	Default Custom Criteria	This is the default custom criteria.	*	*	Wed Dec 15 03:47:46 EST 2010							

Selecting **Add** or **Edit** for any alarm parameter produces a form field that allows users to edit the thresholds for up to 5 classes of alarms. Alarm thresholds can be configured so they only apply to specific sites, cars with certain tag ID's, weights, or other vehicle parameters relevant to the alarm type.

### Edit Impact Exception Criteria

Criteria Name	Default Exception Criteria	Criteria Description	This is the default exception criteria.	
Site	All	Direction	All	Owner Code: *
Car Number:	0	to	999999	Car Category: All
Car Weight:	0.0	to	99999.0	Tons Car Type: All

	A	B	C	D	E	
Peak	0.0	0.0	0.0	125.0	140.0	KIPS
Dynamic	0.0	0.0	0.0	0.0	0.0	KIPS
Ratio	0.0	0.0	0.0	0.0	0.0	
Lateral Nominal	0.0	0.0	0.0	0.0	0.0	KIPS
Lateral Peak	0.0	0.0	0.0	0.0	0.0	KIPS

Update Delete Cancel

Up to **5 classes of thresholds** can be configured for each alarm. The threshold class that an alarm parameter reaches is included in the train report.

# Wheel Data Management System

## Site Health Status

Review the health status of all major WILD site components in real-time, with built-in troubleshooting and diagnostics recommendations.

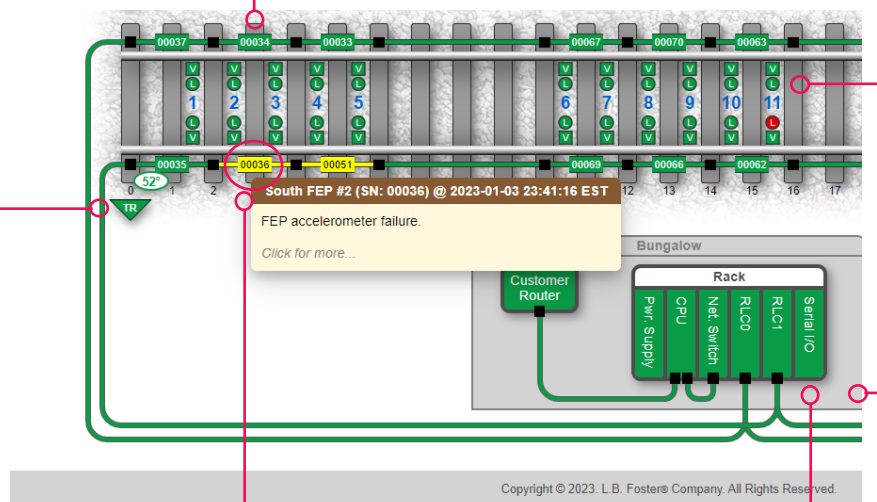

The heart of the design of all WILD systems are its **Front-End-Processors**, which amplify, filter, digitize, and process signals to provide meaningful data. Each Front-End-Processor is monitored independently.

Each WILD system is equipped with a series of **strain gauges**, constantly monitoring for vertical (and optionally, lateral) impacts imparted on the rail. Each strain gauge is monitored independently.

**Tag readers** are typically installed with all WILD systems and can provide automatic car counting and identification (with a valid supplied car library). Locomotive and train identifiers are automatically added to reports when available.

Hovering over any component will display details about any potential faults or failures and may provide recommendations for **corrective actions or troubleshooting steps** to remedy the issue.

All major **Bungalow Equipment** are monitored for health status, including the power supply, CPU, Networking equipment, logic controllers, I/O modules, and comms equipment. Power and communications cabling, both on-track and installed to the bungalow, are also monitored.

The site overview graphical interface displays the **health status** of all major components. Components listed in green are healthy with no issues; those listed in yellow are functional but are experiencing faults; red components need immediate attention. When the condition of a component is unknown due to connectivity issues or non-system related faults, they are listed as grey.
